MODI FILTER

◇ WATER CAPTOR ◇

In-flow fuel filter ModiFilter Water Captor - CFD 70 model is equipped with a water separator. Thanks to this, it is able to separate and absorb the water in diesel fuel. It guarantees full protection of the engine against solid contamination and water. The water absorption gradually reduces the filter capacity and increases the pressure drop caused by the filter.

product features:

- *wide range of applications*
- *replaceable cartridges*
- *high product quality*

**TAKE
CONTROL
OF BUSINESS.**

produced by

GAITER
TANKS, SENSORS
AND SYSTEMS

The filter must be replaced when it becomes filled and the fuel flow decreases.

Due to the function performed, ModiFilter Water Captor CFD 70 filter with a water separator should be installed at the pump inflow.

DATA SPECIFICATIONS

FILTERING CAPACITY:

30 μm

MAX FLOW:

70 l/min

MAX WORKING PRESSURE:

4 bar

BURSTING PRESSURE:

10 bar

INFLOW AND OUTLET:

1"

TYPE OF LIQUID:

diesel
